

Fitting to Dellorto carburettors with a pump diaphragm.

The adjusting screw and lock nut protrude and will only just fit into the clearance hole, a slight bit of filing maybe required in some cases. The holes are in 3 positions to allow the filters to be fitted to close fitting twin carburettor set ups.

The filter is supplied with some blanking plugs so you can blank off some or all of the holes as required.

The pictures are of a 48mm filter fitted to a PHF carburettor, the Jubilee clip is omitted for clarity.
